

## Quiz App

You need to create a very basic Quiz App. Which store questions and answers for a particular exam. Develop this solution in kotlin.

### Requirement Specification

1. User will enter Question.
2. User will enter multiple choices for particular question
3. User will enter correct answer
4. User should get list of all questions with answer
5. User should see test particular question
6. Users will see menu 1. Add Question, 2. Show Questions 3. Test Question 4. Exit.  
Menu will come till the user gives choice 4.

### Hints

1. Create Question class, which will have id(number), question(text), choices(array), anwe(number)
2. Store Questions in ArrayList<Question>
3. Create MenuHelper class
4. Create Repository class
5. Use find, filter, map etc operations
6. Follow the structure
